

H.U.X.L.E.Y.

Feature guide · everything Huxley can do, and how to ask

VOICE & TELEGRAM | UPDATES ITSELF | NOVEMBER 2026

CONVERSATION
Speaks while it thinks, takes follow-ups without the wake word.

"And tomorrow?"

BRIEFING & RECAP
Morning briefing, evening recap, spoken and sent to your phone.

Press BRIEFING

REMINDERS & LISTS
Reminders, timers, repeats, to-do and shopping lists.

"Remind me at 9 to call the landlord."

WEATHER & TIME
Forecasts anywhere, time in any city.

"Weather in Montreal this weekend?"

CALENDAR
Reads your calendar; new events open pre-filled for you to save.

"What's on Friday?"

NUDGES
Event heads-ups, rain warnings, evening recap.

Automatic, 7 AM–10 PM

SCREEN & CLIPBOARD
Looks at your screen or what you copied, only when you ask.

"What's on my screen?"

MEMORY
Remembers lasting facts; review or delete them any time.

"What do you know about me?"

THINK HARDER
Much more thought for one tough question.

"Think hard about this..."

PAGE VIEWER
Web pages, videos and maps inside the Huxley screen.

"Show me the CBC news page."

PC CONTROL
Lock, sleep, shut down (with confirmation), folders, files.

"Find my tax return."

PROTOCOLS
Your own routines, run with one command.

"Work mode."

MUSIC & VOLUME
Play, pause, skip, mute, set the volume.

"Next song." "Volume 30."

WEB READING
Searches the web and reads pages you link.

"Summarize this article: ..."

AUTO-UPDATE
Updates itself every time it starts.

Just start Huxley

HOW TO USE THIS GUIDE
The quotes are examples, not commands to memorize: talk normally. Huxley works out what you mean. The same requests work by typing on the Huxley screen or messaging your Telegram bot.

01

TALKING TO HUXLEY

Huxley starts speaking as soon as its first sentence is ready, and keeps listening for your follow-up after it answers, so it feels like a conversation, not a walkie-talkie.

WAY TO TALK	HOW IT WORKS
Ctrl + Alt + Space	Talk from **any app**: Huxley comes to the front and listens.
Hold Space	Listens the whole time you hold it, even through long pauses. Sends when you let go. Best for long questions.
Click MIC	Listens until you've been quiet for a moment, then sends. Click again to send immediately.
WAKE WORD on	Always listening: start with "Huxley...". Background talk without "Huxley" is ignored.
CONVERSATION on	After a spoken answer, ask a follow-up without pressing anything. Say *"that's all"*, *"thanks Huxley"* or stay quiet for 7 seconds to end it.
Type	Type in the box and press Enter. Replies still appear in the transcript, and are spoken if VOICE is on.
Telegram	Message your bot from anywhere. Same Huxley, same memory. Send `/reset` to start a fresh conversation.

GETTING THE TIMING RIGHT

WAIT SETTING

How long a pause means you've finished: 1.5, 2.5, 4 or 6 seconds. Huxley also adapts: it answers sooner when your sentence sounds complete, and waits longer when you trail off ("and...", "so...", "um...").

BEST VOICE

Use the Edge window Huxley opens. Edge has natural voices such as "Microsoft Ryan". While Huxley speaks it stops listening, so it doesn't hear itself.

THINK HARDER

For a tough question (comparisons, planning, decisions), say *"think hard about..."*, *"take your time"* or *"step by step"*, or press **THINK HARDER** (it turns orange) before asking. It applies to that one question, gives a slower, more careful answer, and costs a few times more than a normal question.

INSTANT ACKNOWLEDGMENTS

When Huxley needs a moment (weather, a web search, your calendar), it says so right away: "Checking the weather." Silence followed by an answer is normal only for very quick replies.

02

YOUR DAY

FEATURE	WHAT TO SAY / WHAT HAPPENS
Morning briefing	At 8:00 (or when you first open Huxley that day): weather and what to wear, today's calendar, reminders and to-dos. Spoken, and sent to Telegram. Press **BRIEFING** any time.
Evening recap	At 9 PM: what's coming tomorrow and anything still open.
Reminders	*"Remind me tomorrow at 9 to call the landlord." "Remind me every weekday at 8 to take vitamins."* Spoken on the PC and sent to your phone. Missed while Huxley was off? It tells you when it starts, marked late.
Timers	*"Set a 10-minute timer for the pasta."*
Manage reminders	*"What reminders do I have?" "Cancel the landlord one."*
Lists	*"Add milk to my shopping list." "Read my to-do list." "Remove number 2." "Clear the shopping list."*
Weather & time	*"What's the weather?" "Will it rain in Ottawa tomorrow?" "What time is it in Tokyo?"*
Nudges	Automatic, 7 AM–10 PM only: a heads-up 10 minutes before calendar events, and one warning a day when rain or snow is likely in the next few hours.

CALENDAR

"What's on today?" "Am I free Friday afternoon?" "Add lunch with Maria Friday at 12:30." Adding opens a pre-filled event in your browser; check it and click **Save**. Huxley can read your calendar but never changes it on its own.

CONNECT GOOGLE CALENDAR

- calendar.google.com → ⚙ **Settings**
- Under *Settings for my calendars*, click your calendar
- **Integrate calendar** → copy **Secret address in iCal format**

CONNECT OUTLOOK.COM

- ⚙ **Settings** → **Calendar** → **Shared calendars**
- **Publish a calendar** → *Can view all details*
- Copy the **ICS** link

THEN

In the Huxley folder run `.venv\Scripts\python -m jarvis.configure`, press Enter through the answers and paste the link at **Calendar iCal link** (Ctrl+V works). Treat that link like a password: never paste it into a chat.

03

ON YOUR PC

FEATURE	WHAT TO SAY / WHAT HAPPENS
Your screen	*"What's on my screen?"* *"Help me with this error."* Huxley hides itself for a second, takes a screenshot, and comes back.
Clipboard	Copy some text, then: *"Summarize what I copied."* *"Fix the grammar in what I copied and put it back."* Then paste with Ctrl+V.
Page viewer	*"Show me the CBC news page."* *"Pull up that YouTube video."* *"Show me a map of the CN Tower."* Opens inside Huxley. Use the address box, **READER** (clean text), **BROWSER** or **CLOSE**. Login sites like Gmail open in your normal browser.
Music & volume	*"Pause the music."* *"Next song."* *"Mute."* *"Volume to 30."* Works with Spotify, YouTube and anything else playing.
Lock, sleep, power	*"Lock the computer."* *"Sleep in 30 minutes."* *"Shut down."* Huxley asks first, and a shutdown always gives you at least a minute: say *"cancel"*.
Folders & files	*"Open my Downloads."* *"Find my tax return and open it."* Searches Desktop, Documents, Downloads, Pictures, Music and Videos.
Apps & websites	*"Open Spotify."* (apps listed in `config\apps.json`) *"Open YouTube in a tab."*

PROTOCOLS: YOUR OWN ROUTINES

Describe a routine once: *"Create a work mode protocol: say 'Let's get to work', open Gmail, play my music, set volume to 30 and read my to-do list."* Huxley reads the steps back and saves them when you agree. After that, just say *"Work mode."* Also: *"What protocols do I have?"*, *"Delete movie night."*

A protocol can open websites and apps, control music and volume, read a list, check the weather, wait, and say something. Nothing more, so a routine can never do anything risky.

SAFETY BUILT IN

Huxley never opens programs or scripts (.exe, .bat, ...) it finds, only documents, pictures and media in your own folders. The viewer only fetches public websites, never devices on your home network.

04

MEMORY & PRIVACY

Huxley remembers in three ways, and you can see and clear every one of them.

WHAT	HOW IT WORKS
Facts about you	When you mention something lasting (*"My sister's name is Maria"*, an allergy, a routine), Huxley saves it and says so. *"What do you know about me?" "Forget the allergy one."* Or press **MEMORY** to see the list and click **FORGET**. It never saves passwords or card numbers.
Recent conversations	After a restart, Huxley recalls your last dozen exchanges. **RESET** (or `/reset` on Telegram) clears them.
Your stuff	Reminders, lists, protocols and settings stay on your laptop, in the Huxley folder.

WHERE EVERYTHING LIVES

FILE (IN THE JARVIS FOLDER)	CONTAINS
`.env`	Your settings and keys. Change them with the settings tool, never by sharing the file.
`data\memory.json`	Facts about you
`data\transcript.jsonl`	Text of recent conversations (delete to wipe)
`data\reminders.json`, `lists.json`, `protocols.json`	Your reminders, lists and routines

PRIVACY RULES HUXLEY FOLLOWS

- Looks at your screen or clipboard **only when you ask** in that message
- Only you can use your Telegram bot
- The Huxley screen only works on your laptop

- Your words, screenshots and copied text go to Claude to be answered; nothing else is shared
- Speech-to-text runs through your browser's (Microsoft's or Google's) speech service

REFERENCE

CONTROLS, SETTINGS & HELP

ON-SCREEN CONTROLS

CONTROL	DOES
MIC · Space	Talk (see page 2)
WAKE WORD · VOICE · CONVERSATION	Always listen for “Huxley” · speak replies aloud · listen for follow-ups
WAIT	How long a pause ends your question
THINK HARDER · MEMORY · BRIEFING	More thought for the next question · what Huxley remembers · today's briefing now
RESET	Start a fresh conversation
Left panels	System, connections, weather, today's calendar, upcoming reminders, to-do list, activity

CHANGING SETTINGS

In the Huxley folder: click the address bar, type `cmd`, press Enter, then run `.venv\Scripts\python -m jarvis.configure`. Press Enter to keep an answer, type `-` to clear one. It covers your key, model, name, city, units, briefing and recap times, Telegram and calendar.

Extra options in `.env`: `TALK_HOTKEY=ctrl+shift+j` · `NUDGES=false` · `HUD_FULLSCREEN=true` · `AUTO_UPDATE=false`

UPDATES & HELP

SITUATION	DO THIS
Getting new features	Automatic each start, or tray icon → **Check for updates**. It asks only about new settings.
Something isn't working	Double-click **checkup.bat** (safe to photograph and share), and tray icon → **Open log**.
Want the old console window?	Run `start-huxley.bat --console` to see live logs.

JARVIS LIVES IN THE TRAY

Huxley runs in the background: a round icon near the clock (click ^ if hidden). Closing its window doesn't stop it; reminders become Windows notifications. Right-click the icon to open, update, restart, start with Windows, or quit.
